Office of the Editor: Tulegatan 41, Stockholm Va

Contents

Volume 18, 1966

NUMBER 1

V. G. Plank—Wind conditions in situations of patternform and non-patternform cumulus convection 1

N. J. MacDonald—Methods of measuring solar and terrestrial atmospheric circulations 13

S.-K. Kao—Three-dimensional oscillations in a jet at high Reynolds numbers 18

A. Ångström and B. Rodhe—Pyrheliometric measurements with special regard to the circumsolar sky radiation 25

G. Fiocco and G. Grams—Observations of the upper atmosphere by optical radar in Alaska and Sweden during the summer 1964 34

J. Nordø—Significance of statistical relations derived from geophysical data 39

P. Welander—A two-layer frictional model of wind-driven motion in a rectangular oceanic basin 54

P. Welander—Note on the effect of rotation on diffusion processes 63

G. Veronis—Generation of mean ocean circulation by fluctuating winds 67

R. F. Chisnell—Outflow from a circular cylinder under the action of Coriolis force 77

R. R. Long and Jeffrey B. Morton—Solitary waves in compressible stratified fluids 79

B. Rodhe—The concentration of liquid water in the atmosphere 86

C. B. Taylor—Tritium in Southern Hemisphere precipitation 1953–1964 105

Y. Toba—On the giant sea-salt particles in the atmosphere. III 132

Shorter contribution

J. K. Syers—The relationship between the concentration of nitrate- and ammonia-nitrogen in precipitation 146

Book review

F. H. Ludlam 147

F. Möller 148

NUMBER 2–3

SECTION A

W. Bischof and B. Bolin—Space and time variations of the CO_2 content of the troposphere and lower stratosphere 155

J. R. Blankenship and P. J. Crutzen—A photochemical model for the space-time variations of the oxygen allotropes in the 20 to 100 km layer 160

R. D. Cadle and J. W. Powers—Some aspects of atmospheric chemical reactions of atomic oxygen 176

W. Dansgaard, H. B. Clausen and A. Aarkrog—The Si^{32} fallout in Scandinavia 187

P. Harteck, R. R. Reeves, Jr., B. A. Thompson and R. W. Waldron—Radiation equilibria pertinent to planetary atmospheres 192

L. G. Sillén—Regulation of O_2, N_2 and CO_2 in the atmosphere; thoughts of a laboratory chemist 198

H. E. Suess—Some chemical aspects of the evolution of the terrestrial atmosphere 207

SECTION B

S. Aegerter, N. Bhandari, Rama and A. S. Tamhane—Be^7 and P^{32} in ground level air 212

F. Anyz—A contribution to the detection of the aerosols containing sulphate particles 216

A. E. Bainbridge and L. E. Heidt—Measurements of methane in the troposphere and lower stratosphere 221

A. C. Chamberlain and R. C. Chadwick—Transport of iodine from atmosphere to ground 226

R. A. Duce, J. W. Winchester and T. W. van Nahl—Iodine, bromine, and chlorine in winter aerosols and snow from Barrow, Alaska 238

D. H. Ehhalt—Tritium and deuterium in atmospheric hydrogen 249

B. Gonsior, I. Friedman and G. Lindenmayr—New tritium and deuterium measurements in atmospheric hydrogen 256

E. Mészáros—On the origin and composition of atmospheric calcium compounds 262

H. Mrose—Measurements of pH, and chemical analyses of rain-, snow-, and fog-water 266

R. Nydal—Variation in C^{14} concentration in the atmosphere during the last several years 271

O. P. Petrenchuk and V. M. Drozdova—On the chemical composition of cloud water 280

J. W. Winchester and R. A. Duce—Coherence of iodine and bromine in the atmosphere of Hawaii, northern Alaska, and Massachusetts 287

Shorter contribution

I. U. Olsson, I. Karlén and A. Stenberg—Radiocarbon variations in the atmosphere 293

J. Schölch, W. Stich and K. O. Münnich—Measurements of radioactive xenon in the atmosphere 298

SECTION C

B. Davidson, J. P. Friend and H. Seitz—Numerical models of diffusion and rainout of stratospheric radioactive materials 301

H. W. Feely, H. Seitz, R. J. Lagomarsino and P. E. Biscaye—Transport and fallout of stratospheric radioactive debris 316

W. S. Hering—Ozone and atmospheric transport processes 329

I. L. Karol—Quantitative investigation of stratospheric mixing processes by means of long lived radon decay products 337

R. J. List, L. P. Salter and K. Telegadas—Radioactive debris as a tracer for investigating stratospheric motions 345

L. Machta—Some aspects of simulating large scale atmospheric mixing 355

R. E. Newell, J. M. Wallace and J. R. Mahoney—The general circulation of the atmosphere and its effects on the movement of trace substances. Part 2 363

SECTION D

A. D. Belmont and D. G. Dartt—The non-repeating variations of the observed wind in the equatorial stratosphere 381

N. Bhandari, D. Lal and Rama—Stratospheric circulation studies based on natural and artificial radioactive tracer elements 391

G. V. Dmitrieva, Ju. V. Krasnopevtsev, V. V. Lukjanov and S. G. Malakhov—Investigation of the radioactive aerosol distribution over oceans and some problems of the latitudinal exchange in the tropical zone 407

A. J. Dyer—Artificial radio-activity, ozone and volcanic dust as atmospheric tracers in the Southern Hemisphere 416

G. Lambert, B. Ardouin, M. Nezami and G. Polian—Possibilities of using lead 210 as an atmospheric tracer 421

D. H. Peirson, R. S. Cambray and G. S. Spicer—Lead-210 and polonium-210 in the atmosphere 427

O. Tanaevsky and J. Blanchet—Meteorological study of the course of radioactive debris 434

W. Warmbt—Surface ozone and artificial β-activity in Dresden-Wahnsdorf 441

SECTION E

R. J. Charlson—A simple noctilucent cloud model 451

K. Edvarson and J. Sisefsky—Observations on the particle properties of nuclear debris in the upper atmosphere 457

J. P. Friend—Properties of the stratospheric aerosol 465

Y. I. Gasiev, S. G. Malakhov, L. E. Nazarov and A. N. Silantiev—The size distribution of radioactive particles from nuclear weapon tests and their transport in the atmosphere 474

E. A. Martell—The size distribution and interaction of radioactive and natural aerosols in the stratosphere 486

J. P. Shedlovsky and S. Paisley—On the meteoritic component of stratospheric aerosols 499

SECTION F

N. Bhandari, S. G. Bhat, D. P. Kharkar, S. K. Swamy, D. Lal and A. S. Tamhane—Cosmic ray produced Mg^{28}, Si^{31}, L^{38}, Cl^{38}, Cl^{34} and other short-lived radioisotopes in wet precipitation 504

P. Kruger—Influence of inversions upon precipitation deposition of radioactive aerosols 516

E. S. Selezneva—The main features of condensation nuclei distribution in the free atmosphere over the European territory of the USSR 525

P. B. Storebø—Aerosol behaviour traced by artificial and natural radioactivity 532

B. I. Styra, E. J. Vebra and K. K. Shopauskas—Determination of some parameters of radioactive aerosol removal from the atmosphere 541

F. W. Went—On the nature of Aitken condensation nuclei 549

SECTION G

H. Israel and G. W. Israel—A new method of continuous measurements of radon (Rn^{222}) and thoron (Rn^{220}) in the atmosphere 557

F. Koroleff—Direct spectrophotometric determination of ammonia in precipitation 562

K. S. Shifrin and A. Y. Perelman—Determination of particle spectrum of atmosphere aerosol by light scattering 566

K. T. Whitby and W. E. Clark—Electric aerosol particle counting and size distribution measuring system for the 0.015 to 1 μ size range 573

SECTION H

P. Grevet—Etude des variations de l'intensité d'ionisation « α » et « γ » au voisinage du sol 587

G. Madeleine—Comportement des descendants du radon et du thoron en atmosphère dépoussiérée 593

A. Renoux—Etude des noyaux de condensation radioactifs de l'atmosphère 598

A. Renoux—Etude de la radioactivité artificielle fixée sur les noyaux de condensation atmosphérique au niveau du sol 610

R. Siksna—The recombination or combination time in expressions for volume recombination and combination of air ions and other aerosol particles 619

SECTION I

J. Fontan, A. Birot, D. Blanc, A. Bouville and A. Druilhet—Measurement of the diffusion of radon, thoron and their radioactive daughter products in the lower layers of the Earth's atmosphere 623

G. W. Israel—Meteorological influences of the thoron (Rn^{220}) content of the atmosphere 633

H. Israel, M. Horbert and G. W. Israel—Results of continuous measurements of radon and its decay products in the lower atmosphere 638

S. G. Malakhov, V. N. Bakulin, G. V. Dmitrieva, L. V. Kirichenko, T. I. Ssissigina and B. G. Starikov—Diurnal variations of radon and thoron decay product concentrations in the surface layer of the atmosphere and their washout by precipitations 643

J. E. Pearson and G. E. Jones—Soil concentrations of "emanating radium-226" and the emanation of radon-222 from soils and plants 655

J. Servant—Temporal and spatial variations of the concentration of the short-lived decay products of radon in the lower atmosphere 663

K. G. Vohra, M. C. Subbaramu and A. M. Mohan Rao—A study of the mechanism of formation of radon daughter aerosols 672

M. H. Wilkening, M. Kawano and C. Lane—Radon-daughter ions and their relation to some electrical properties of the atmosphere 679

Other contributors at the Symposium 685, 686

NUMBER 4

F. H. Ludlam—Cumulus and cumulonimbus convection 687

C. W. Newton—Circulations in large sheared cumulonimbus 699

C. L. Godske—On time dependence of smoothed variables 714

J. Jeou-Jang—Statistical theory of precipitation process 722

J. Namias—A weekly periodicity in eastern U.S. precipitation and its relation to hemispheric circulation 731

A. Nyberg and H. Modén—The seasonal distribution of precipitation in the area east of Stockholm and the daily distribution in a few selected cases 745

B. L. Dzerdzeevskii—Some aspects of dynamic climatology 751

R. Berggren and K. Labitzke—A detailed study of the horizontal and vertical distribution of ozone 761

W. Bleeker, W. Dansgaard and W. N. Lablans—Some remarks on simultaneous measurements of particulate contaminants including radioactivity and isotopic composition of precipitation 773

C. C. Wallén—Global solar radiation and potential evapotranspiration in Sweden 786

A. K. Ångström and A. J. Drummond—Note on solar radiation in mountain regions at high altitude 801

R. Scherhag—Die tägliche Druckvariation über Mitteleuropa im Sommer 806

J. Van Mieghem, P. Defrise et J. Van Isacker —Analyse harmonique zonale des températures stratosphériques 814

J. Bjerknes—A possible response of the atmospheric Hadley circulation to equatorial anomalies of ocean temperature 820

J. Holmboe—The growth of a young frontal wave 830

E. Palmén—On the mechanism of the vertical heat flux and generation of kinetic energy in the atmosphere 838
